9 a.m. -12 noon (Simulcast: Northern Michigan University, Marquette,
Central Michigan University, Mount Pleasant and Wayne State
University, Detroit)

Cost: Free

Register: <https://www.surveymonkey.com/r/ASDREGISTRATION>

Autism Spectrum Disorder is a pervasive diagnosis for children of all ages and ethnicities. Information regarding early diagnosis and referrals continues to be problematic for health care professionals. This training will enable health care professionals to better understand the symptomatology of Autism Spectrum Disorder, identify concerns as early as possible, and to make a referral with conviction.

Outcomes:

- Health care providers will be able to assess, screen, make appropriate referrals and understand behavioral analysis interventions for youth that display symptoms of Autism Spectrum Disorders (ASD).
- Health care providers will understand the roles and responsibilities of an interdisciplinary team approach in the care of youth with ASD.

Objectives:

- Identify symptoms of ASD
- Identify evidence based screening tools and how to use them in the assessment of ASD
- Identify appropriate health care specialty referrals for youth suspected of ASD
- Demonstrate an understanding of applied behavioral analysis in the treatment of ASD
- Compare and contrast the roles of interdisciplinary team members in the screening, evaluation and treatment of ASD

Target Audience: Health care professionals including physicians, physician assistants, nurse practitioners, registered nurses, certified medical assistants, social workers and community health workers.

Presenters:

Krista Clancy, MS, LLP, BCBA

Director of Behavioral Services

University Pediatricians Autism Center, Wayne State University

Scott McPhee, MS, BCBA, Supervising Behavioral Consultant,

University Pediatricians Autism Center

Wayne State University
