Take your career to the next level…

…with a degree that can help you get ahead in today’s manufacturing market.

Manufacturing Engineering
Bachelor of Science in Engineering

Do you have what it takes to be a productive leader in engineering and manufacturing? WMU’s B.S. in Engineering will help you develop the ability to take a product or concept and design the manufacturing processes to make it a reality… a skill in great demand as industries compete in the global market.

This program provides students with:

• The expertise needed by manufacturers in automotive, furniture, appliances, metal working, plastics, paper, and other industries
• An understanding of how to design for manufacturability
• A working knowledge of CAD, process modeling, and simulation
• An understanding of the design process from concept to customer

WMU Extended University Programs offers:

• The seamless transfer of credits from pre-engineering programs at area community colleges to the B.S.E. program.
• A curriculum designed for the full-time working adult with courses scheduled in the late afternoon and evening on the main campus as well as at branch campuses.
• Financial aid, such as student loans. Check with your employer on possible tuition reimbursement programs.
