This series is directed by Anne N. Brown, Assistant Professor, with assistance from Syasi Asefa, William Kern, Christopher O'Leary, and Hsiu-hong Zhou.

Alan H. Gelb
Chief Economist, Africa Region
World Bank

Dr. Gelb was a Rhodes Scholar and received his Ph.D. in economics from Oxford University. He is currently Chief Economist for the Africa Region and the Regional Technical Manager for Economic Management and Social Policy in the Africa Region of the International Bank for Reconstruction and Development, commonly known as the World Bank. Prior to this, Dr. Gelb was the Staff Director of the 1996 World Development Report on the Transition from Plan to Market. He was also the Director of the Chief of the Transitions Division in the Policy Research Department.

During his long tenure at the World Bank, Dr. Gelb has visited, researched, and advised numerous developing countries in Africa, Asia, Europe, and Central and South America, including many of the countries considered to be transition economies. He served as a member of several special task forces in the World Bank, including those created to review project and countrywide strategies and promote the World Bank's role in the international economy. He was invited to the World Bank's first ever international conference (in 1990), and was responsible for overseeing the components on agriculture and rural development.

Dr. Gelb's series of research has included commodity price stabilization and control, empirical analysis and microeconomic systems, macroeconomic theory and modeling, and microeconomic applications in China, financial systems in China, and Chinese economic systems. Recent publications have appeared in the Journal of International Economics, Economic Development, Policy and Practice, and International Finance Review. Dr. Gelb has also authored numerous books and articles on economic development and financial systems, including books on economic development and financial systems, and has served on the editorial board of several other journals.
