Sustainable Craft Brewing | Western Michigan University

The Sustainable Craft Brewing Science program is an interdisciplinary 4-year curriculum that will educate students on the rich landscape of craft brewing and help them comprehend and address the environmental challenges faced by the industry in the 21st century.

- Nation's first sustainable brewing degree
- Combines Kalamazoo Valley Community College's food science and culinary arts expertise with Western Michigan University's research resources and national reputation in water research and sustainability
- Training and education designed to meet the brewing industry's gold standard
- Hands-on learning through internships in a teaching brewery
- Curriculum developed with input from 10 of Michigan's top brewers
- Interdisciplinary focus that includes chemistry, biosciences, physics and environmental science
- First-hand experience going through the process of brewing from grain to glass
